

Product Launch

Spectera SKM Handheld

Shipping commences from mid-September 2026

Sennheiser is pleased to announce that the Spectera SKM handheld transmitter commences shipping in mid-September 2026. Customers planning deployments are encouraged to place their orders now.

The addition of the SKM completes the core Spectera ecosystem, bringing handheld microphones together with bodypack transceivers, in-ear monitoring, remote control and wireless management within one integrated wireless platform.

With the core ecosystem now complete, Spectera is ready to simplify virtually any professional live performance or broadcast application—delivering professional wireless without the complexity.

What this means for resellers

With the core Spectera ecosystem now complete, resellers can offer customers a single professional wireless platform that supports a broader range of live performance and broadcast applications.

Key benefits include:

- A complete Spectera solution for handheld microphones, bodypack transceivers and in-ear monitoring within one integrated wireless ecosystem.
- Simplified wireless workflows—from planning and deployment through to performance, monitoring and load-out.
- Greater flexibility to support a wider range of customer applications using a single wireless platform.
- An expanding platform that continues to evolve through software updates and future hardware additions.

Model Overview

The Spectera SKM handheld combines stunning Sennheiser audio clarity with the intelligence of the Spectera platform. Designed for professional live performance and broadcast applications, it delivers ultra-low-latency audio and the reliable wireless performance of Spectera's digital WMAS architecture.

Available in both UHF and 1.4 GHz variants, the SKM is compatible with select Sennheiser and Neumann microphone capsules, allowing engineers to tailor the microphone to the performer while maintaining a consistent workflow. Spectera's wideband architecture delivers reliable performance in increasingly demanding RF environments while simplifying RF planning and deployment.

Designed to take full advantage of Spectera's bidirectional wireless architecture, the SKM provides real-time visibility of battery status, RF performance, audio levels, interference conditions and link quality, while enabling remote control of key microphone parameters. Together, these capabilities help simplify system management and provide greater operational confidence throughout a production.

As part of the Spectera ecosystem, the SKM also supports over-the-air firmware updates, ensuring it remains ready for future functionality enhancements.

Product Launch

Spectera SKM Handheld

Shipping commences from mid-September 2026

Model Overview (continued)

Model	Item Number	Description	Delivery Includes	Image
SPECTERA SKM (UHF)	509166	Handheld transmitter with bi-directional control. Capsules and batteries sold separately. UHF Range	SPECTERA SKM Handheld transmitter (capsule and batteries sold separately)	
SPECTERA SKM (1G4)	509165	Handheld transmitter with bi-directional control. Capsules and batteries sold separately. 1G4 Range	SPECTERA SKM Handheld transmitter (capsule and batteries sold separately)	

Key Features

- Stunning Sennheiser audio clarity with latency down to 1.0 millisecond
- Compatible with select Sennheiser and Neumann microphone capsules
- Available in UHF and 1.4 GHz variants
- Continuous bidirectional transmission of audio and control data
- Continuous remote monitoring of battery status, RF performance, audio levels, interference conditions and link quality
- Remote control of key microphone parameters through the Spectera platform
- Wideband WMAS architecture for reliable operation and simplified RF planning and deployment
- Shared rechargeable battery platform
- Over-the-air firmware updates
- AES-256 encryption
- Rugged metal housing with integrated OLED display

Compatibility

To operate with the Spectera SKM handheld transmitter, the Spectera Base Station must be updated to firmware version 1.4.2 or later. The firmware will be available to download from the Spectera Base Station product page in line with the Spectera SKM availability.

The SKM uses the shared BA 70 rechargeable batteries (sold separately).

Product Launch

Spectera SKM Handheld

Shipping commences from mid-September 2026

Ecosystem Expansion

The Spectera ecosystem continues to evolve, with additional accessories planned for release soon to further extend the capabilities of the platform.

SPECTERA SKM COM

The SKM COM command adapter adds user control directly to the handheld transmitter, enabling configurable functions such as mute and push-to-talk at the press of a button .

Capsule Adapters

Two variants of capsule adaptor are planned to extend microphone capsule compatibility, providing additional flexibility for customers. Further information, availability and ordering details will be communicated closer to launch.

Additional accessories and ecosystem enhancements will continue to be introduced as the Spectera platform evolves.
